OVERVIEW

Phoenix Cyber's Security Orchestration, Automation, and Response (SOAR) installation and configuration offering deploys a baseline of the Swimlane's low-code security automation platform.

This engagement includes the following high-level activities:

- Planning, designing, implementing, and verifying the SOAR environment
- Knowledge transfer of all design, deployment, and operations procedures

The SOAR installation and configuration services include:

- Pre-deployment readiness checklist
- Baseline SOAR platform deployment
- Package installation
- Role-based orchestrated dashboards and reports
- Administrator account and platform readiness for the organization's development team

To fulfill the engagement, Phoenix Cyber's SOAR architect will install and configure Swimlane's SOAR platform on-premises or in the cloud by remote delivery.

KEY BENEFITS

- **Cost savings:** Reduced cost to install and configure the SOAR platform with a remotely delivered service.
- **Accelerated SOAR platform deployment:** Utilizing industry best practices and SOAR-certified SMEs with first-hand experience deploying Swimlane increases how quickly the SOAR investment is deployed.
- **Rapid time-to-value:** By empowering the security team with SOAR, this new capability increases the organization's ability to respond to more alerts faster, without adding additional headcount.
- **Team skill development:** This engagement enables key staff to develop the skills and capabilities required for SOAR operational sustainment.
