PHOENIXCYBER

DATASHEET

SOAR Readiness Assessment

AT A GLANCE

This service provides a thorough evaluation of a new or potential SOAR customer's automation needs, including an assessment of the current team's capabilities, processes, and technologies to determine areas to focus on to achieve the most value from a SOAR investment.

DELIVERABLES

- SOAR Roadmap
- Project Implementation Timeline

SCHEDULE

Two Weeks

ASSESSMENT TEAM

- Phoenix Cyber will work in partnership with the organization and its team to conduct the Assessment.
- Phoenix Cyber accesses and reviews key information with organization stakeholders (engineering, operations & leadership).

SKU

PC-SOAR-RAS

OVERVIEW

Phoenix Cyber's Security Orchestration, Automation, and Response (SOAR) Readiness Assessment evaluates an organization's level of preparedness for implementing a SOAR solution. The Assessment helps organizations understand how to best integrate their security tools and teams and automate security operations to enable a more efficient, reliable, and cost-effective response to threats.

During the Assessment, the Phoenix Cyber team will provide a SOAR specialist to evaluate all aspects of the organization's security operations and identify any gaps or improvements that may need to be addressed before implementing a SOAR solution. Areas of evaluation include:

- **Security Operations Processes:** The Assessment includes an evaluation of the organization's current incident response process, including how incidents are detected, prioritized, escalated, investigated, and resolved, including all current workflows used by the security operations team.

- **Technology Infrastructure:** The Assessment includes a full review of the organization's current stack of security tools, including each tool's ability to integrate with the SOAR solution. It also includes an analysis of the organization's network, compute, and records management requirements for security operations.

- **Team Capabilities:** The Assessment also provides an evaluation of the organization's current security engineering and operations teams. It will identify strengths, weaknesses, and gaps associated with the security organization's roles and responsibilities.

Based on the findings of the SOAR Readiness Assessment, the Phoenix Cyber team will develop a roadmap and timeline for implementing SOAR, while noting any identified gaps or weaknesses. This ensures successful implementation and enables the organization to realize the full benefits of the SOAR solution.

SOAR Readiness Assessment

KEY BENEFITS

- **Improved security operations efficiency:** Identifying gaps in the organization's security operations and addressing ineffective incident response processes, uncoordinated teams, or lack of automation will improve its overall security posture.

- **Optimized security resources:** Reviewing the organization's entire security technology infrastructure and team's capabilities ensures they have the right resources in place to take advantage of the full benefits of SOAR.

- **Accelerated incident response times:** Once organizations understand the gaps in their current incident response process and identify areas of improvement, they can enable a more automated incident response strategy, thus decreasing their time to respond to threats.
