

Quicker, more efficient response to vulnerabilities

Vulnerability Risk Scoring and Reporting Solution

Phoenix Cyber's Vulnerability Risk Scoring and Reporting Solution (VRSRS) helps your security team quickly and easily visualize, triage, prioritize, and remediate vulnerabilities. Avoid wasting precious time digging through thousands of vulnerability alerts. Instead, enable your security team with a solution that can assign an accurate, tailored score to more efficiently prioritize the remediation of your organization's most critical vulnerabilities.

Key Benefits

Faster, More Efficient Response to Security Vulnerabilities

Enhanced Productivity to Reduce Mean Time to Remediation (MTTR)

Improved Information Integrity and Accountability

Comprehensive Insights into Your Security Operations

Consistent, Auditable, and Compliant Response to Vulnerabilities

Key Features

Providing detailed scoring and prioritization of vulnerabilities enables your security team to act on the most pressing issues with urgency and precision with end-to-end control of the entire vulnerability management process. VRSRS's comprehensive functionality and integration with your other security systems allows you to maintain an enhanced and proactive cybersecurity posture.

Vulnerability Data Ingestion and Correlation

VRSRS enables the universal ingestion of data from vulnerability scanners and the ability to correlate that data within each case. Correlated vulnerabilities are tied directly to their assets for a one-to-one relationship. This allows for correlation of the enrichment and event data to be managed within a single solution. Integration with leading governance, risk, and compliance (GRC) tools helps security teams better understand the criticality of a vulnerability based on business impact.

Centralized Asset Database

A centralized database provides a systematic approach to collect, store, and manage data about your company's hardware and software assets. This inventory of assets helps your organization understand their importance and manage the security risks associated with them.

Scoring and Prioritization of Vulnerabilities

The scoring calculator is a sophisticated tool that assigns severity scores to identified vulnerabilities based on the Common Vulnerability Scoring System (CVSS) framework. This system considers a variety of factors, including the complexity of the attack vector, the privileges required for an exploit, user interaction, and the potential impact on confidentiality, integrity, and availability. VRSRS provides the ability to re-score vulnerabilities based on your specific environment and then assign a meaningful score based on the impact of the vulnerability in the environment where the asset is located.

Intuitive Interface to Track and Display SLA Adherence

VRSRS includes an intuitive interface with powerful features to navigate the complexities of incident management and ensure service level agreements (SLAs) are maintained. The ability to track and display SLA usage is critical for monitoring ongoing cases and ensuring they are addressed within the appropriate time limits.

Ticketing and Case Management

Integration with your enterprise ticketing systems allows for tracking from discovery to resolution. Tickets include timestamps, unique identifiers, and status. This ensures that the lifecycle of each vulnerability is documented and auditable. VRSRS also facilitates direct communication with system owners through its email alert system, ensuring stakeholders are immediately aware of vulnerabilities and corrective actions are taken promptly.

System and Access Controls

Acknowledging the importance of cross-departmental collaboration, VRSRS includes role-based access controls (RBAC) with customizable dashboard views and functionality for each role. This ensures that stakeholders can view only relevant details and take specific actions.

Custom Reporting and Dashboards

Detailed reporting capabilities help security teams and the broader business understand the decisions made throughout the entire incident management process and provide custom reports and dashboards for all levels and areas of the business. VRSRS offers comprehensive reporting and analytics capabilities, providing insights into security operations and helping to identify trends, additional vulnerabilities, and areas for improvement.

Get In On The Action

See how the Vulnerability Risk Scoring and Reporting Solution can transform your security team's productivity.
