

# Streamline privacy compliance documentation

## Privacy Compliance Management Solution for Federal Agencies

Ensuring privacy compliance across hundreds of information technology systems across your Federal Agency can be daunting. Even when all of the data is tracked (likely through a paper process), assigning tasks, reporting on privacy compliance KPIs, and completing mandated documentation is unwieldy without a custom solution.

### THE SOLUTION

The Federal Privacy Compliance Management Solution is an automated end-to-end system based on custom workflows. It includes features such as:

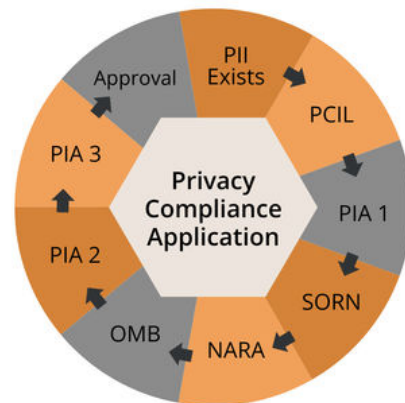

- **Business workflows** employing RBAC, task tracking, and automated user notifications
- **Business intelligence** with KPIs, workflow monitoring, and management reporting
- **Integration** with any other key business applications and systems
- **Flexibility** to adapt the system and processes to your Agency's unique requirements

### THE BENEFITS

This solution provides an automated, streamlined end-to-end process to complete required compliance documentation while providing critical transparency and real-time reporting to the appropriate stakeholders.

In fact, one Federal Agency that implemented the tool **sped up a Privacy Impact Assessment (PIA) form completion over 250%**, from 97 days down to 27 days.

The solution built by Phoenix Cyber is considered the new platinum standard for accomplishing privacy compliance within the Federal Government. After demonstrations, some federal privacy officers stated that the product left them "jaw-dropped, starry-eyed, and salivating," and asking how they could obtain it.
